

Digital Well Database

Norwegian Continental Shelf

A comprehensive overview and analysing tool for wells is the basis for HC exploration in mature basins, like on the Norwegian continental shelf (NCS). AGGS is offering **GIS- and EXCEL-based databases** as supplementary exploration tool to public databases, the following modules are available:

Finds & Shows

- Regionally and stratigraphic overview of HC discoveries
- All NCS Exploration Wells (~1950 wells)
- Plus 2450 UKCS wells along the Norwegian boarder

Porosity & Permeability

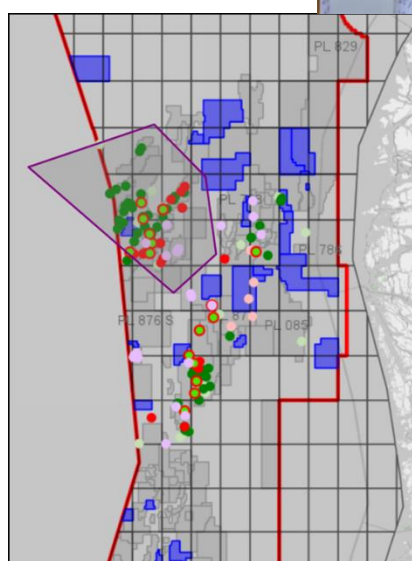

- 1200 cored wells (~300 000 data points)
- 730 wells from North Sea
- 233 wells from Norwegian Sea
- 123 wells from Barents Sea

DST Analyses

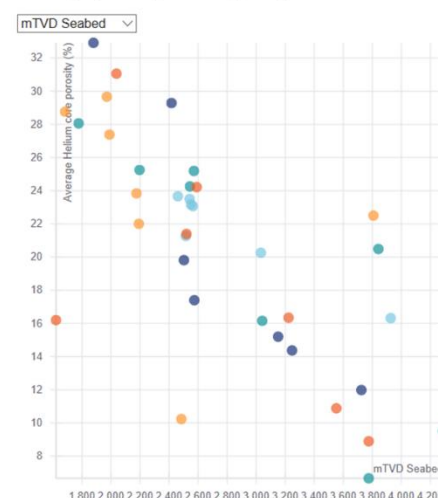

- 440 wells – 782 tests

Check Shots

- All NCS well

Average porosity - Average depth

The databases are offered as single standing modules or as a complete package as GIS or EXCEL version. You can get access to a web-based GIS application (Geodata) or we install the databases on your in-house GIS system.

The databases are carefully qc'ed and will be biannually updated.
